

Use-Case Flow Specification

Automated Rubric Assignment Evaluator

Use Case: UC-01 – Upload Project Submission

Primary Actor: Student

System: Automated Rubric Assignment Evaluator

1. Preconditions

1. The Student has a valid account in the system.
2. The Student has a project ZIP file ready for submission.
3. The Automated Rubric Assignment Evaluator is available to accept submissions.

2. Postconditions

1. The submitted project is successfully added to the evaluation queue.
2. A unique submission ID is generated for the project.
3. The Student receives confirmation that the project has been submitted successfully.

3. Main Success Scenario

1. The Student logs into the Automated Rubric Assignment Evaluator.
2. The Student selects **Upload Project Submission**.
3. The system displays the project upload interface.
4. The Student selects and uploads the project ZIP file.
5. The system validates the uploaded project file.
6. The system generates a unique submission ID.
7. The system automatically places the valid project submission in the evaluation queue.
8. The system displays a confirmation message containing the submission ID.
9. The Student receives confirmation that the project has been successfully submitted.
10. The use case ends successfully.

4. Alternate Flow – Invalid Project File

5a. Invalid Project File

1. At Step 5, the system detects that the uploaded project ZIP file is invalid or cannot be processed.
2. The system displays an appropriate error message to the Student.
3. The system rejects the invalid submission.

4. The Student is prompted to upload a valid project ZIP file.
5. The invalid project is not added to the evaluation queue.
6. The use case ends without creating a successful submission.

5. Outcome

For a successful submission, the project is placed in the evaluation queue and assigned a unique submission ID. The project can then proceed through the automated evaluation process, including syntax and unit-test execution and rubric-based scoring.
